

Infinity Greenspeed Technology

What does it offer?

The highest HSPF in the industry

Heat pumps are powered by electricity. You can compare efficiencies of different heat pump models by checking the HSPF (Heating Seasonal Performance Factor) and SEER (Seasonal Energy Efficiency Ratio) ratings, available through your dealer or manufacturer web sites. The published ratings provide a standardized method for comparing how much heating or cooling comfort you get for the electricity you use.

Using these ratings is a lot like miles per gallon for your car - the higher the number, the more efficient the product and the greater potential for savings. With the new Infinity® Heat Pump with Greenspeed™ intelligence, Carrier has significantly raised the bar for HSPF ratings.

So when you are comparing heat pumps, be sure to look at both HSPF (winter efficiency) and SEER (summer efficiency) before you make your decision.

Indoor Air Quality Options For Healthier Living Add Value To Your Home

Infinity™ Air Purifier

Designed for use in the return air duct of a forced air heating, cooling, and ventilation system. The Infinity™ Air Purifier both captures and kills airborne viruses, bacteria, mold spores, and allergens, delivering maximum air purification.

Edge Programmable Thermostat

One control gives complete system access to home comfort system including furnace, fan coil or air conditioner and optional accessories such as humidifiers, ultraviolet lights and filtration products.

Humidifier

Carrier whole house humidifier provides needed moisture in winter months. Proper humidity control can eliminate static electricity and dry skin while protecting valuable home furnishings.

Zoning System

Controls up to 4 distinct spaces or zones in a building. Each zone has independent temperature and mode settings controlled by a programmable Carrier thermostat.
